

Epsilon Solutions

Epsilon Solutions
Reliable Engineering Services

Competence in Engineering and Support Services

Epsilon Solutions is our design, engineering and technical services portfolio for clients who require a reliable partner to take care of various technical support activities within Data Centres or in their own Points of Presence.

Epsilon draws from a vast amount of experience in dealing with cabling, installation and engineering works to deliver to customer expectations, all in a timely and professional manner. Carriers can improve their service delivery and efficiency by outsourcing these activities to a strong and efficient provider who

understands the technology and systems from its own experience as an operator.

We have gained a wealth of experience in Network and Data Centre design and build. As a result, turnkey solutions are now offered to customers who are faced with these types of projects, but lack the experience or the resources to do it themselves.

We know how often market conditions change and how different each customer requirements are; therefore, we have tailored Epsilon Solutions to remain compatible yet

flexible. Each solution is adapted specifically to each customer's requirements, ensuring our services are in line with the customer's business-operation models and processes.

Epsilon Solutions offers reliable First Line Maintenance, Remote Hands and other system integration services to ensure the guaranteed availability of your systems without the need of having a local presence. The permanent technical developments in our market have led us to adapt Epsilon Solutions by offering this wide array of services:

- *Network Design and Build*
- *Data Centre Design and Build*
- *First Line Maintenance & Remote Hands*
- *System Integration*
- *Cabling & Patching*
- *Network & Network Elements Monitoring*
- *Hardware Supply*
- *Administrative Business Support*
